EXPERIENCE

Software Engineer | [Rekkaa – Freelance](#)

Jun 2026 – Present

Remote, Indonesia

- Lead the technical delivery of a fullstack SaaS platform for taxation, accounting, and payroll operations, covering the entire product lifecycle from planning to production.
- Design scalable architecture supporting 1,000+ users and develop end-to-end frontend and backend features.
- Containerize services with Docker and manage server deployments.
- Integrate payment gateways and build subscription workflows.
- Build reusable design systems and engineering standards to keep the codebase consistent and maintainable.
- Ensure system reliability, security, and maintainability in production, balancing product strategy, infrastructure management, and business requirements.

Fullstack Software Developer | [PT Noxus Ideata Prima](#)

July 2022 – Present

Tangerang Selatan, Indonesia

- Lead a team of developers in designing application architecture, defining system concepts, and mapping business workflows.
- Develop and maintain backend and frontend of applications, ensuring alignment with predefined business requirements and workflows.
- Optimize application performance and handle post-launch maintenance, bug resolution, and feature enhancements.
- Design efficient application workflows to ensure seamless user interaction and achievement of business objectives.
- Collaborate with business stakeholders to gather requirements, translate needs into technical solutions, and communicate project progress.
- Deploy and maintain applications on VPS servers using Docker and Nginx.

Fullstack Developer | [NASCLIM – Freelance](#)

2024 – 2025

Remote, Indonesia

- Developed a web-based climate monitoring platform supporting sustainable mangrove management and environmental action.
- Built real-time analytics dashboard, community education modules, and carbon land restoration monitoring features.
- Integrated environmental data analysis tools to empower stakeholders with actionable, data-driven insights.

Backend Developer | [Sagara Technology](#)

Feb 2022 – Aug 2022

Jakarta, Indonesia

- Developed and delivered application features collaboratively across tech teams using Node.js, Express.js, PostgreSQL, Docker, and Nginx.
- Participated in daily stand-up meetings to ensure alignment on sprint goals and team progress.
- Deployed and maintained application services on Google Cloud Platform using Docker.
- Identified and resolved bugs, and contributed to feature improvements to enhance application quality.

Backend Developer | [Tamadun Technology International](#)

Nov 2021 – Feb 2022

Yogyakarta, Indonesia

- Maintained and developed application features using Node.js, Express.js, MongoDB, Docker, and Postman.
- Participated in daily stand-up meetings to track project progress and coordinate with the team.
- Resolved bugs and enhanced existing features to improve application stability and performance.

SKILLS

Backend Development: Node.js, Fastify.js, Sequelize, MongoDB, Docker, PostgreSQL, Elasticsearch, ClickHouse, Payment Gateway Integration

Frontend Development: HTML, CSS, TypeScript, React.js, React Native, Next.js, Tailwind CSS, Nginx

Architecture: Microservices, Monolith, System Architecture Design, SaaS & Subscription Platforms

Analysis & Documentation: System Analysis, Business Analysis, BRD (Business Requirements Document), FRD (Functional Requirements Document)

Project Management: Agile, Waterfall, Airtable, ClickUp, Trello

Soft Skills: Public Speaking, Stakeholder Communication, Workflow & Application Design

PROJECTS

STROVIA – Sound Therapy Application

Built a mobile and web wellness product using 528 Hz frequency therapy and subliminal audio to support mental relaxation and stroke recovery. Combines audio-healing research with an intuitive interface, a personal AI companion chat, and a subscription-based listening experience. Built with React Native, audio streaming, and AI chat integration.

CryptoEx – Crypto Signal Scanner Platform

Developed a multi-timeframe (MTF) crypto signal scanner platform with automated analysis across 20+ technical indicators from 4 major exchanges: Binance, KuCoin, OKX, and Crypto.com. Features include a Fear & Greed Index, real-time WebSocket charts, and an intuitive signal dashboard built with React.js and Node.js.

SCJ Shipping – International Logistics Portal

Built a multi-page corporate website for an international logistics company covering Sea Freight, Air Freight, Trucking, and Warehouse services. Delivered a professional company profile, service pages, and CMS integration using Next.js.

NASCLIM – Climate Technology Platform

Developed a web-based monitoring platform supporting sustainable mangrove management and climate action through integrated environmental data analysis. Features a real-time analytics dashboard, community education modules, and carbon land restoration monitoring built with Next.js.

REPUBLIK BIOSPHERE – Investment Holding Portal

Developed a strategic corporate platform for an investment holding ecosystem, bridging global investors with sustainable green portfolios. Focused on premium corporate profile presentation, subsidiary visibility, and corporate news delivery, wrapped in a world-class UI/UX.

STIKES Mitra Keluarga – Campus Information Portal

Built a modern and responsive academic web ecosystem to strengthen institutional credibility and facilitate digital communication. Delivered redesigned campus information interface, intuitive navigation for prospective students, admissions news integration, and a professional institutional profile.

SMA – Smart Audit Management System

Designed and developed an integrated web system to streamline audit planning, real-time monitoring, and structured digital reporting for institutional transparency. Built a complete ecosystem covering KKA (Audit Working Papers) management, LHA reporting, and follow-up action monitoring with high-security standards.

BRISMA v2.0 & v2.0.2 – BRI Audit Management System

Built an internal web application to digitalize BRI's audit management system, integrated with BRI's internal big data infrastructure for enterprise-scale audit operations.

BRISMA v2.1 – BRI Subsidiary Audit System

Developed and maintained an internal audit management application for a BRI subsidiary, extending digital audit capabilities and ensuring consistency across the group.

BRI TKT – Tata Kelola Terintegrasi

Developed and maintained an internal platform to collect and integrate BRI's internal big data, displayed through a unified integrated governance dashboard.

BTPN – Morethanajob Portal

Maintained a public-facing landing page and CMS admin panel for BTPN's employer branding platform, featuring a job portal and BTPN program information.

Neurovi Medical System

Developed and maintained a hospital management information system (HMIS) integrating drug stock management, doctor scheduling, patient registration, and surgical procedure management.
